

ILPPWA 2019 report - Toxics Link India - Lead in Paint

Introduction

Lead (Pb), a toxic heavy metal is being used in paints since ages. However after the health impacts of lead came into the limelight, many countries in Europe and USA started taking decisive action to phase out lead from paints. But the issue was never addressed in the developing countries. Toxics link first released a report in India in 2007 and found very high content of lead in paints sold in India. Following this Toxics Link and International POPs Elimination Network (IPEN) jointly published a report in 2009 covering ten developing countries and found high content of lead in paints sold in all these countries. The report received international attention and triggered global action to eliminate lead from paints. Subsequently the issue was accepted as an emerging policy subject in Strategic Approach to Chemical Management (SAICM) and the Global Alliance to Eliminate Lead Paint (GAELP) was mooted jointly by the World Health Organization (WHO) and the United Nations Environment Programme (UNEP) to focus and catalyze the efforts to achieve international goals to prevent children’s exposure to paints containing lead and to minimize occupational exposures to lead paint.

Efforts to eliminate lead from paints

The issue of Lead in paints was never discussed in India until 2007 when Toxics Link did the first-of-its-kind study on Lead in paints. The study reflected a grim scenario as high content of Lead in the paints was detected in almost all the brands. Subsequently, Toxics link carried out a number

2007	2009	2011	2013	2015	2016	2017	2018	2019
Highest lead content: 140,000 ppm	Highest lead content: 49,593 ppm	Highest lead content: 34,700 ppm	Highest lead content: 160,000 ppm	Highest lead content: 127,000 ppm	GOI notified regulation on lead in paint 90 ppm	Highest lead content: 74,200 ppm	Highest lead content: 199,345 ppm	Highest lead content: 109,289 ppm

Table 1 : History of Lead Paint in India

of studies and found that though the major manufacturers have shifted to lead-free paints there are still concerns on the use of Lead in paints by the small and medium scale enterprises.

Finally the Government of India acted upon the issue and it notified the “Regulation on Lead contents in Household and Decorative Paints Rules, 2016” on 1st November, 2016 which came into force from 1st November, 2017.

Regulation on Lead in Paints in India

The Regulation on Lead contents in Household and Decorative Paints Rules, 2016

Salient features of the rules:

- **Prohibition:** Prohibition of manufacturing, trade, export and import of household and decorative paints containing metallic lead in concentration exceeding 90 parts per million.
- **Self-Certification:** Household and decorative paints manufactured or imported after November, 2017 should have the label: “Lead contents do not exceed 90 parts per million” along with the manufacturing/importing date.
- **Transitory Provision:** The rules had set a window of two years for sale of the paints manufactured before commencement of the legislation till November 2017.
- **Testing:** The manufacturers and importers are also required to get their products tested once a year before putting them in supply chain. The rule has also identified The Central Power Research Institute as the authorized testing agency.

As per the provisions of the rules, on 31st October, 2017 the Central Pollution Control Board notified the Procedure for Measurement of Lead contents in Household and Decorative Paints- Reg. explaining the applicability, requirements and testing procedure for the Lead in Paint Regulations. The document provides details on the assessment of existing and new paints and provides the sampling and testing protocol. It also entails the procedure for analysis of Lead in Paint and lists out authorized agencies for testing, implementation and monitoring.

Importance of the study

The present study was conceived to get an overview of the present compliance status of lead-safe paints available in India, in the context of lead in paints regulations. The compliance of Lead in paints regulations is critical considering children’s health and environment. Furthermore efforts have been made to reach out to the small and medium-sized manufacturers to understand the challenges in shifting to lead-free paints.

Toxics Link with the help of the partner NGOs conducted a brief survey of the paint markets in different parts of the country (Rajasthan, Andhra Pradesh, Punjab and Odisha) to identify the brands that are commonly available in the market. During the survey efforts were made to reach out to the small and medium manufacturers. After identification of the brands, samples of enamel paint were collected from all these places (including Delhi) between July 2019 and September 2019.

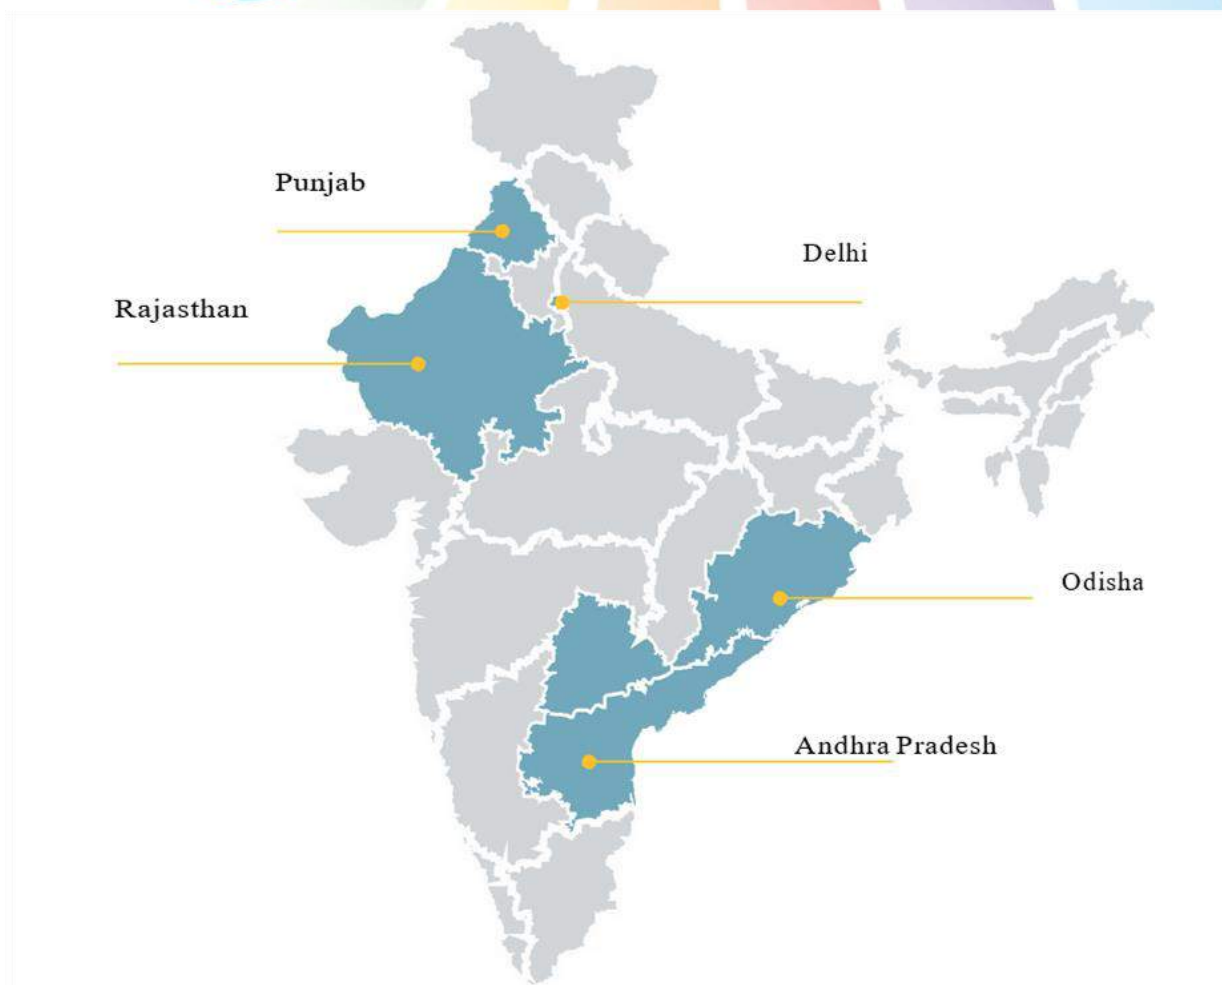

Figure 1 : Sampling locations

In this study, a total of 17 samples of enamel paint of different brands manufactured by small and medium enterprises were collected. The samples were manufactured during or after the year 2018 as the lead in Paint Regulation, 2016 has been implemented since November 2017.

Methodology

During the paint sample preparation, information such as color, brand, country of manufacture, purchase details, manufacturing date as provided on the label of the paint can were recorded. The availability of these paints in retail establishments suggested that they were intended to be used for homes. For the purpose of testing bright and dark colours such as yellow, green, red, blue, cherry, etc. were selected.

Each can of paint was thoroughly stirred and was subsequently applied onto individually numbered specific sized transparent glass plates. Some samples were prepared in duplicate to check the testing performance. Each stirring utensil and paintbrush was used only once, and extra caution was taken to avoid cross contamination. All samples were kept in a closed room till they were completely dried and after complete drying, the glass plates were placed in individual resalable plastic bags and sent to the NABL accredited laboratory (SPECTRO analytical lab. Ltd., Okhla, New Delhi) for analysis of total lead content of dry weight of the paint. The paint samples were analyzed using the CPSC-CH-E1003-09 (Inductively Coupled Plasma (ICP) spectroscopy method, as recognized by both the WHO and the United States Consumer Product Safety Commission as appropriate for the purpose.

Figure 2 : Paint sample preparation on glass

Results

In the present study 20 samples (which includes 3 samples in duplicate) were analyzed for total lead content. The detailed results are presented in the table below

- All the analyzed paint samples have lead level above 90 ppm
- The lead content was observed between 189 ppm to 109289 ppm which is above the prescribed standard of 189 ppm as per the regulation.
- The lowest lead content (189ppm) was observed in a P O red colored sample collected from Odisha. This sample can was labelled as **“less than 90 ppm of lead”**
- The highest lead concentration 109289 ppm was observed in a golden yellow colored paint collected from Rajasthan
- The samples collected from Delhi clearly mentioned ‘no added lead’ but both the samples were found to have 49321 ppm (golden yellow) and 473 ppm (cherry) of lead.

SN	Sample Code	State	Colour	Labelling-Lead content	Results(PPM)
1	TL - 01	Andhra Pradesh	P O Red	Not mentioned	85444
2	TL - 02	Andhra Pradesh	Oxford Blue	Not mentioned	3932
3	TL - 03	Andhra Pradesh	Bus Green	Not mentioned	57198
4	TL - 04	Andhra Pradesh	Golden yellow	Not mentioned	74972
5	TL - 05	Delhi	G. Yellow	No added lead	49321
6	TL -06	Delhi	Cherry	No added lead	473
7	TL -07	Delhi	P.O. Red	Not mentioned	37268
8	TL -08	Delhi	G. Yellow	Not mentioned	57563
9	TL -09	Delhi	Phiroza	Not mentioned	2946
10	TL - 10	Odisha	P O Red	Less than 90 ppm	189
11	TL -11	Punjab	P.O. RED	Not mentioned	50714
12	TL -12	Punjab	P.O. RED	Not mentioned	55978
13	TL -13	Punjab	P.O. Red	Not mentioned	45967
14	TL -14	Rajasthan	Golden yellow	Not mentioned	109289
15	TL -15	Rajasthan	P O Red	Not mentioned	98046
16	TL -16	Rajasthan	Bus Green	Not mentioned	50050
17	TL -17	Rajasthan	Golden yellow	Not mentioned	67484
18	TL -18	Repeat (TL -09)	Phiroza	Not mentioned	2668
19	TL - 19	Repeat (TL -06)	Cherry	No added lead	393
20	TL - 20	Repeat (TL – 11)	P.O. RED	Not mentioned	51422

Figure 4 - Lead concentration (in ppm) in enamel paint manufactured by SMEs in 2018

Implementation Bottlenecks

The lead in paints rules were notified on November 1, 2016 and came into force from November 2017. Furthermore the rules have the provision that no lead paints can be manufactured after November 2017 and the old paints manufactured before November 2017 can be sold only for two years. However going by the present trend, the study has raised serious concerns on the implementation of the rules on ground.

Some of the major gaps in implementation identified in this study are:

- Paints containing high levels of lead which have been manufactured in the year 2018 and 2019 are widely available across the country in clear violation of the rules.
- The study has reflected that the small and medium scale enterprises are not adhering to the 90 PPM lead standard as per the rules.
- Almost disturbing fact that came out in the study was that high content of lead has been detected even in the paint cans labelled as Lead-free
- One of the labelled samples was found to have about 548 times higher lead level than the Indian lead in paint standard i.e. 90 ppm.
- The retailers are selling very old paints where high content of lead has been detected.
- No monitoring or compliance mechanism is in place to check lead level in paints.

Conclusion

The study reflected the extremely grim scenario of the use of Lead in paints in the country even after the rules came into effect from November 2017. Astonishingly all the paint samples that were tested have Lead content above 90 PPM which shows the poor implementation of the rules in the country with no checks and balances and monitoring system in place. The scenario is quite prevalent across the country as the samples have been collected from five states; Delhi, Rajasthan, Punjab, Odisha and Andhra Pradesh. Further, over the year Toxics Link studies have found that there are serious bottlenecks with Small and Mediums Scale Enterprises (SMEs) in adhering to the regulation of 90 PPM.

Lead exposure in case of children, especially below the age of six, can affect their behavioral and cognitive development and can also cause death. The study has confirmed that toxic lead paints are readily available in the market and no action has been initiated to remove these paints from the shelves. Hence it is of utmost importance that the regulators need to act on the large-scale violation of the rules and ensure Lead-safe paints are available in the market considering its environment and human health.

Action Points

- **Compliance and monitoring**
 - Strengthening the monitoring system to check the compliance of Lead paints regulation.
 - Raising public awareness through media (digital, paper or social), radio or TV shows
 - Facilitating technical and/or financial assistance to the SMEs to shift to lead-free technology
 - Periodic testing of samples to check the compliance.
 - Penalty for selling the Lead paints though labelled as Lead free

 - **Role of the paint industries**
 - Creating and distributing information materials to make vendors/retailers aware with an aim of increasing consumer awareness.
 - Organizing periodic awareness programs for the retailers
 - Producing Lead-free paints as per the regulations

 - **Consumers**
 - Checking the labels on paints and opting against lead-containing paints.
 - Inquiring about lead-safe paints, health risks etc. from the vendors.
-
